

Sinks Pharmacy: Biological Hormone Replacement Therapy (BHRT) Clinical Services

Model:

1. Physician identifies a patient requesting or a candidate for BHRT.
2. Physician will ask the patient to complete a pre-screening hormone evaluation provided by Sinks Pharmacy.
3. Physician may choose to prescribe independently or can send the evaluation to our pharmacist for therapy recommendation.
 - a. Once the evaluation is received, the pharmacist may reach back out to the patient for additional follow-up questions or establish the patient's top symptoms he or she would like to focus on.
4. Pharmacist will then submit his or her recommendation to the prescribing physician with a brief summary on a prescription template.
5. Physician may choose to sign the prescription as recommended or make modifications to the recommended order.
6. Physician's office faxes the order or electronically prescribes the order to Sinks Pharmacy St. Clair.
7. Sinks Pharmacy staff would notify the patient of price and arrange delivery.
8. Prior to refill, the patient would be contacted by the pharmacy team to determine how the patient is responding to therapy and evaluate continuing current therapy or making a dose adjustment recommendation to the physician.
9. Once the patient becomes stable on therapy, every effort will be made to provide the patient with a 90 day supply to provide a cost-break to the patient.
